This folder contains a Python program for pinning the US states on a map.

The user writes the name of the state in a textbox (starting and ending empty spaces or upper / lower case do not matter) and if the state exists, it appears on the map.

The number of found states appears at the top of the textbox.

The game stops when the user types "Exit".

The name and the co-ordinates of each state on the map are saved in a csv file.

The states the user has not found are saved in a csv file at the end of the game.
